NEW NORMAL

N. (2021)

increased sedentary lifestyles; reduced water intake; constant attention on devices. In the new normal, sedentary lifestyles are common, we are glued down to the chair of our computers, tending to endless errands while forgetting to tend to your body. I want to help people get back to the act of moving. Get them up to drink a glass of water, stretch, or a breath of fresh air while being as non-intrusive as possible as to not interfere as well as help them keep and boost their productivity.
