BS in Computer Engineering

May 6, 2022

To the Director of Admission and Aid of USC:

This letter contains the answers to my personal statement sheet for my application to the University of San Carlos.

I have been implementing software solutions for humanitarian needs since the 7th grade through science investigatory projects (SIP); and business problems as a product designer at Symph, Inc for three years. Studying BS CpE will pair my solutions with the appropriate hardware. It will equip me with the skills necessary to solve problems and hit sustainable development goals in my fields of passion, namely medical informatics, education, and business.

I hold altruism and efficiency dearly. I enjoy lesser-known research to innovate solutions like brain-computer interfaces. From my experience, reaching out for feedback helps me achieve my dreams. I also provide mentorship to juniors. What does not help me is deprivation of opportunity and a passive teaching style.

I have created a website to help the admission team paint a more holistic picture of me: <https://www.carlkho.com/>. The team can reach me at the contact details I above. I hereby confirm that I am the sole author of the written work here enclosed in my own words. I am grateful for the opportunity to be admitted in USC.

Sincerely,

Carl Kho
