Global Student Challenge 2022

Let's get this bread

Research & Development on Emerging Technologies; that is the ultimate goal.

look for another heading

Here is a story: during Carl's elementary years, he would be locked in his room upon arrival from school so that he would study. The kid who was overly enthusiastic about playing Minecraft could only get out once it was 6PM. Sometimes he would make do with a sneaked Gameboy advanced, but sometimes he would actually get his textbooks and solve problems involving pi (**π)**.

Nevertheless, Carl grew up a consistent honor student. He would go from being the only kid who gave his valedictory speech memorized during Kindergarten to being the only group in research who has had their paper published, prototyped, and submitted a semester earlier in Senior High School—with a perfect score of 100 at that.

Carl was blessed to have a mother who would nurture him from an early age. He recalls excitedly learning about memorizing terms in civics so that when mom would arrive from work, Carl would answer the questions before it even left her mouth.

Today, he still hits and even exceeds his academic goals—with Carl getting the "with highest honor" for the first time—despite giving more focus on learning new tech like React JS and Firebase to continue making a difference in his community and at work. Carl strives for efficiency and he has a strategy to manage and get the best out of both school and work: creating with purpose.
